

# I'm 55

55 Year Old Concrete Apron  
Brunswick-Golden Isles Airport  
Brunswick, GA

## Invest Wisely

**Concrete Airfields  
can be  
constructed fast...  
and are  
constructed to last!**

Originally called Naval Air Station Glynco, much of the current Brunswick Golden Isles Airport apron and runway was built using concrete. It was a wise investment as the concrete pavement is 55 years old and is still in great condition even though the only maintenance it has received was a joint reseal project. In fact, the concrete pavement has a better condition rating than a **much** younger asphalt pavement also located at the airport.

Concrete airfield pavements are a great choice because they resist degradation from fuel spillage, reflect light for better visibility, provide better traction, and do not rut or shove. Most importantly they provide the best investment by saving you time and money because of their exceptional durability, long life and low maintenance. So invest your money wisely by choosing concrete for your airfield pavements and overlays.
