

I'm 46

**For 46 years
I've helped
people
get a grip**

**46 Year Old Concrete Pavement
Interstate 55
in Pike County, MS**

Concrete pavements are the best choice for safety and durability and when it comes to driving safely, getting a grip matters. The slightly textured surface concrete can be given during construction helps provide a superior traction surface for your vehicle's wheels that can be especially important during rain or wet driving conditions. And since concrete pavements do not rut, there is no risk of water accumulating in the ruts and causing hydroplaning.

Concrete pavements often exceed their own life expectancy, just like this 46 year old concrete pavement on Interstate 55 in Pike County. Now, if there were just more materials on earth that could have the durability of concrete.

Find out more about Concrete Pavement's many benefits by calling:
