# Break the Cycle

**36 Year Old Concrete Pavement**  
**Interstate 95**  
**Colleton County, SC**  
(photo taken at SC 63 Exit 53)

Concrete pavements can break the cycle of constant maintenance and resurfacings. Concrete pavements provide the longest life span with the lowest life-cycle cost. You can find examples of concrete pavement's unmatched durability all around South Carolina; just like this section of I-95 near Walterboro, SC that is 36 years old and has been virtually maintenance free!

Of course, less maintenance also translates into fewer work zones and that's good news since work zone accidents have increased. So, go ahead, break the cycle of constant maintenance and keep traffic moving like it should by simply using the most durable, sustainable, and best value for the long and short term. Use concrete pavements.

For more information on the many benefits of Concrete Pavements, please call:
